

## Pytheas Conning Application

Pytheas Conning is a software application designed to present vessel's navigation and operational status with utmost clarity.

Instant comprehension, evaluation and awareness of the vessel's operational conditions by the OOW is achieved by displaying only the items which are relevant at the specific time.

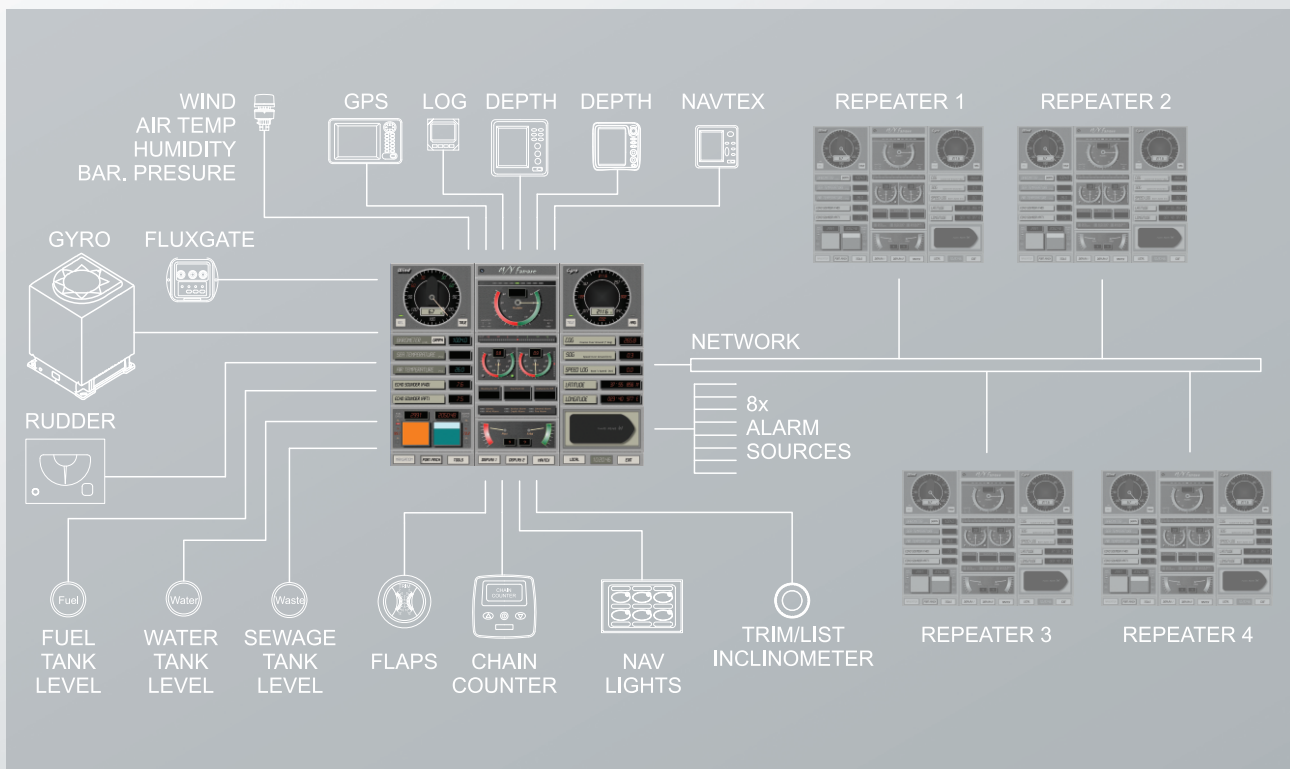

Pytheas Conning was built and redesigned several times to be able to reach captains' needs. Installer-friendliness has been also achieved by incorporating unique hardware interfacing complex along with an easy graphical installer interface.

Pytheas repeater application for remote viewing via wired or wireless Ethernet is also available.

## Features

- Designed on mega yacht captain's experience, incorporating all available latest technology
- superior minimal design saves hassle and effort to the yacht designer
- no need for several displays all around the navigation bridge
- 3 distinct modes: navigation - port - tools
- All available Navigation Data "at a glance" simplifies the work of the OOW
- Additional data (daily tanks, inclinometer, chain counter) add on to an efficient vessel's management
- Alarm panel provides a comprehensive awareness to the captain
- Pytheas repeater: a handy tool at crew mess or captain's cabin
- 8 serial inputs / 8 udp ports / up to 24 analog inputs / up to 256 discrete inputs
- H/W and S/W support by the same manufacturer: no incompatibilities

## Typical Application

**nuova marea ltd**  
marine electronics & design

26, Myrtidiotissis str., Kastella  
185 33 Pireus, Greece
